

SHEARWATER<sup>®</sup>  
CUSTOM FISHING BOATS

**CAROLINA FLARE** SERIES

Class of the Field

**CAROLINA FLARE** SERIES  
**25 - 26**

American Marine Sports, LLC. proudly announces the arrival of the new **Carolina Flare Series**. Designed for versatility, our Carolina Flare combines the unrivaled Shearwater® standards of effortless function, exceptional performance, and exquisite form, with the Carolina Style bow for a boat that can do it all. From fishing the bay to fishing offshore, the distinctive flared bow, and Deep V bottom ensure the Carolina Flare will cut through the waves of even the roughest waters for a fast, agile, and dry ride.

SHEARWATER

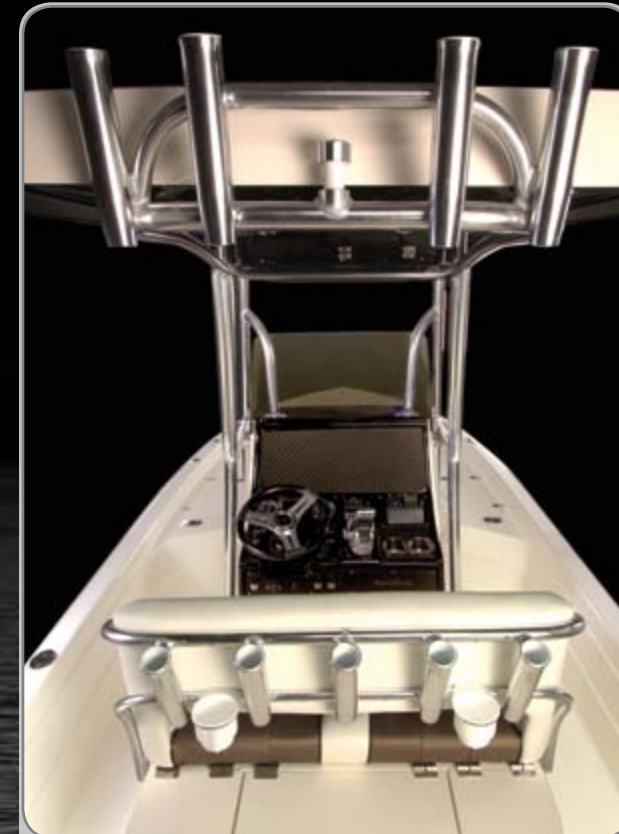

**LIMITED EDITION** SERIES

The World's Finest Bay Boat

**LIMITED EDITION** SERIES  
**23 - 25**

The Exciting New Limited Edition Shearwater® comes loaded and equipped for any occasion. For the avid angler or the serious pleasure boater she's a lethal weapon that out performs every boat in her class, while offering every amenity. Upgrade options are standard features on this model, making the Limited Edition Shearwater® the only boat you and your Family will ever need.

SHEARWATER

**LTZ** SERIES  
The boat that profoundly changed the bay boat industry...

**LTZ** SERIES  
**23 - 25**

The revolutionary ShearWater® LTZ incorporates as standard equipment every feature required in a serious tournament bay boat, a professional guide boat, and a weekend family multi-purpose boat to create an exceptionally versatile bay boat.

**TOURNAMENT EDITION** SERIES

The Competitor's Choice

***TOURNAMENT EDITION*** SERIES  
***22 - 23 - 25***

Designed for the discriminating angler, the competition ready Tournament Edition (TE) Series is built for performance, stability, and comfort. The HPI injected foam core and performance design guarantees a smooth, quiet, and dry ride in every condition. Extra seating, oversized live wells, open cockpit, and large casting platforms insure effective fishing and family fun. The TE gives you the "Winning Edge".

## **X22 HYBRID**

The Best of Both Worlds

The versatile Shearwater® X22 crossover is a finely balanced hybrid combining all the advantages of both a flats and a bay boat. With extra large casting decks, walk around gunnels, and low profile stand up center console it has an unique and appealing combination that you won't find in any other boat.

## Where The Revolution Began...

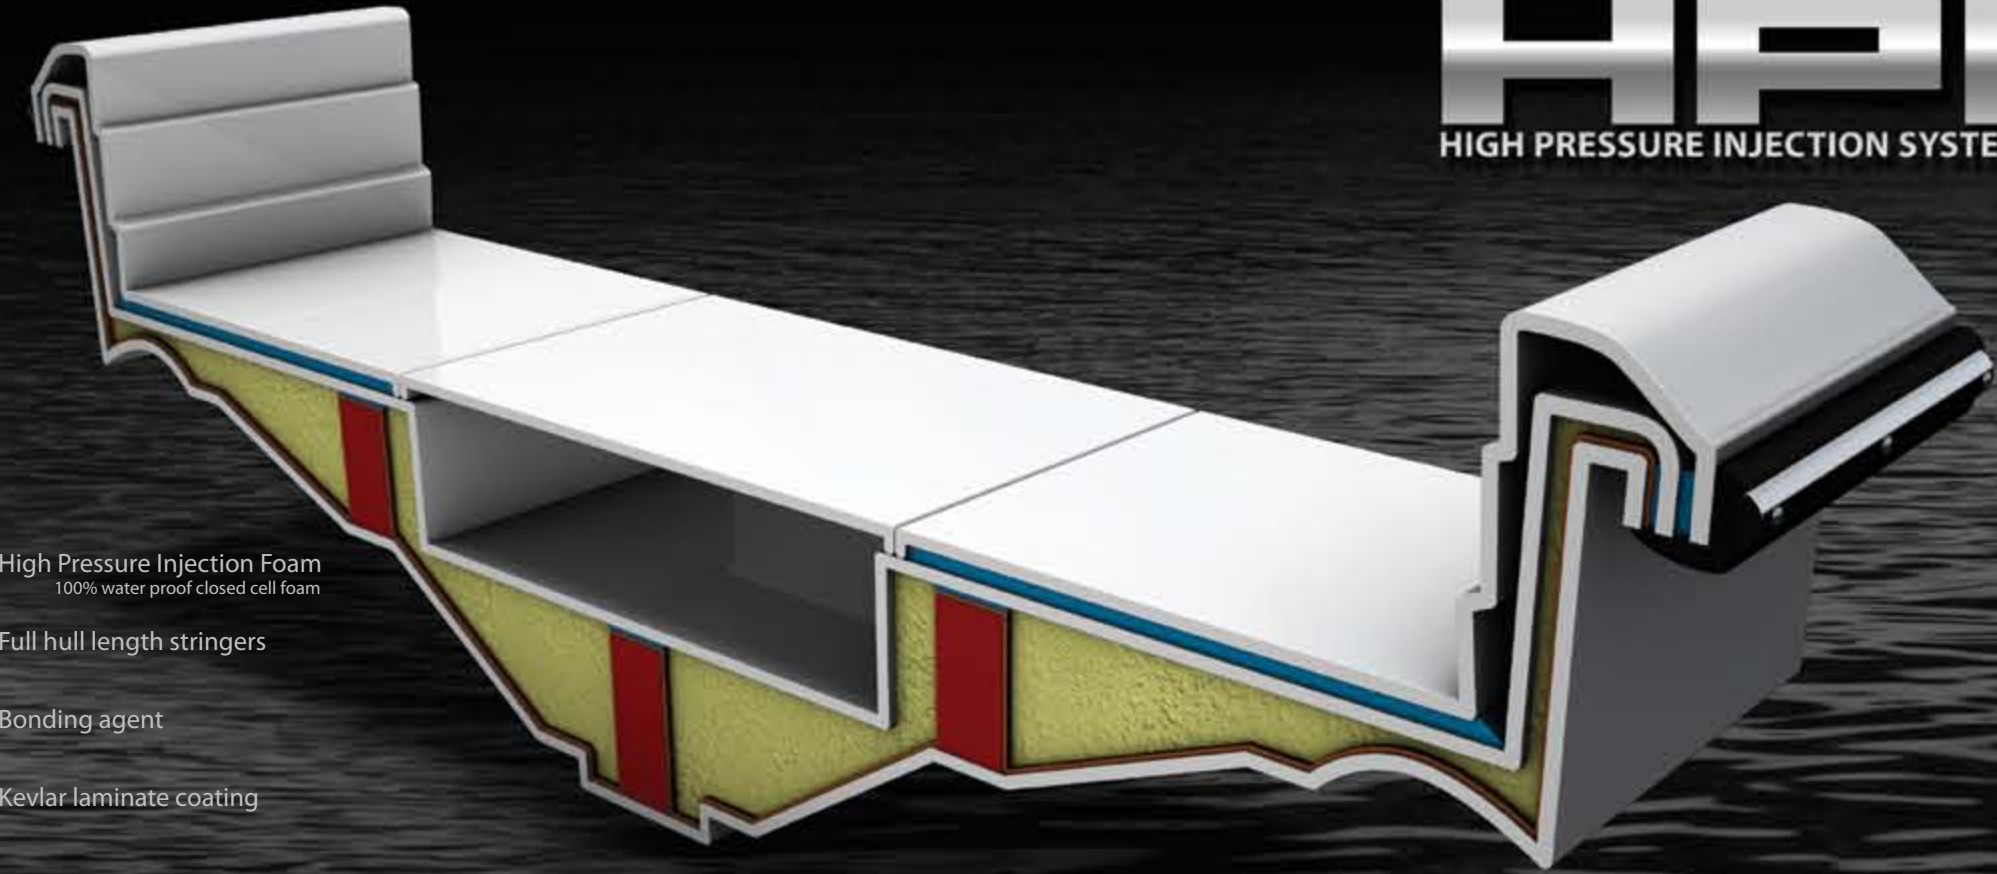

The "American Marine Revolution" in bay boat concepts was launched with the introduction of the original Shearwater® by company founder Bob Ackerbloom in 2000, and continues with the introduction of each exciting new model today. Rooted in a passion for performance design, a highly skilled team of craftsmen committed to an uncompromising mission: "To create the most innovative, best engineered and most intensely satisfying bay boats imaginable". The effortless function, exceptional performance, and exquisite form of every Shearwater® continue to reflect the extraordinary vision and talent of this team, who is now world renowned for design with cutting edge concepts and technology that far surpass conventional trends.

All products designed and marketed by American Marine Sports, LLC. are manufactured in a specialized facility utilizing the latest in equipment and technology to ensure the highest quality available. Strategically located in Central Florida, on a private test lake, all products are factory rigged and fully water tested by trained personnel to ensure that every system and component functions properly prior to final inspection and delivery. American Marine Sports' success is derived from the quality of its reputation, products, and service, and considers their Dealers as partners in providing every customer with the superior quality of product they expect and deserve.

# HPI

HIGH PRESSURE INJECTION SYSTEM

-  High Pressure Injection Foam  
100% water proof closed cell foam
-  Full hull length stringers
-  Bonding agent
-  Kevlar laminate coating

The ShearWater® hull design is precisely produced utilizing the ShearWater® exclusive "HPI" double hull foam core injected process. The ShearWater® "HPI" process incorporates a structurally sound outer hull chemically bonded to a matching full length complete inner hull with high strength water proof closed cell foam structural flotation foam core injected under pressure between the two hulls.

The outer hull is structurally sound without the addition of the inner hull. The 100% All composite outer hull is hand laminated utilizing fine finish exterior fiberglass matt, high strength structural biaxial fiberglass fabric, composite core material and a layer of Dupont Kevlar over the entire bottom for extreme strength and puncture resistance. The outer hull is structurally reinforced with hand laminated full-length composite stringers and keel. The high-density composite transom is reinforced with hand laminated composite knee braces. The totally sealed and filled double hull structure eliminates the possibility of water intrusion into the hull. One of the most important benefits of the advanced "HPI" technology is undoubtedly the extreme safety factor built into every boat. The benefits of the "HPI" process are further enhanced through the use of the Shearwater® exclusive process of chemically bonding the deck to the double hull creating a solid unitized one-piece structure.

The ShearWater® proprietary "HPI unitized construction" method is initially very expensive to put into production. The inner hull is complex and time consuming to create. The inner hull mold and the outer hull mold have to be

exceptionally strong to withstand the high internal pressure created during the foam injection process. The "HPI" process requires additional manufacturing space, additional steps in the process, and demands that the deck and the hull remain in their molds much longer than the typical construction methods. The additional time in the mold has the benefit of allowing the exterior gelcoat and fiberglass laminate the necessary time to thoroughly cure. The additional curing time is one of the most important factors that contribute to the ShearWater® exclusive, exceptionally straight, brilliant, exterior gelcoat finish.

This ShearWater® exclusive technology creates a strong, durable, flex-free, unitized structure that cuts through waves silently and smoothly to deliver a comfortable and confident true sense of security.

The unitized "HPI" process reinforced with Dupont Kevlar produces products with such consistently high strength and durability that costly warranty repairs are virtually eliminated. Based upon 20 years of trouble free experience with the "HPI" process, American Marine Sports, LLC. offers a limited lifetime hull warranty with total confidence.

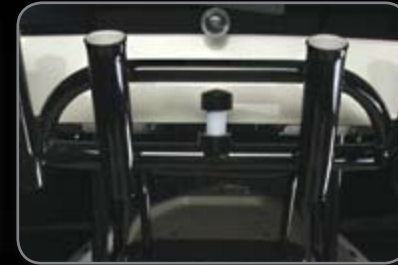

ShearWater® Options (see specifications chart for model applicability)

Folding Dual Station-Up

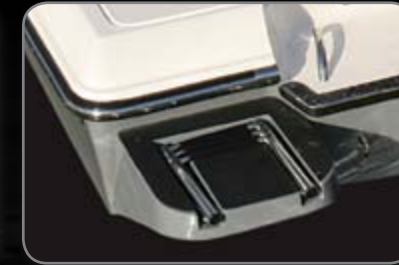

Folding Dual Station-Down

Ski Tow & Rocket Launchers

6 Jet Misting System

Swim Platform

Stainless Steel Windlass Anchor

Livewell System with Sink

Fusion Stereo System with iPod Docking

Red/White LED's, Spreader Lights & Speakers

Bow Cushion Package

ShearWater® Standard Features

Deluxe Console

Plush Marine Upholstery

Console Rod Holders

Hydraulic Jack Plate

Recessed Trim Tabs

Pop Up Cleats

Lid Latches

Wiring Harness Deutch Connector

Quick Release Hose Clamp

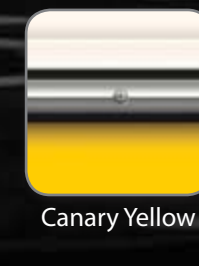

Washdown Pumps

**VOLTAGE SENSITIVE RELAY (VSR)**—Shearwater Boats have three distinct and separate electrical systems; the boat wiring system, the accessory wiring system, and the trolling motor system. The Boat wiring system has only those electrical items essential for the safe operation of the boat connected to the cranking battery. The accessory wiring system utilizes the house battery to power all accessories including bait well pumps, courtesy lights, radio, depth finder, fresh and raw water pumps, and automatic bilge pumps. When the engine is running, the electrical output from the alternator is controlled by a (VSR) which maintains the cranking battery to 13.6 volts, at which point it directs the full output to the house battery to bring the house battery back to 13.6 volts. Therefore, the cranking battery remains fully charged ready to start the engine, and the house battery is re-charged as long as the engine is running. The trolling electrical system has three batteries completely isolated from the boat and house electrical systems
